- Intelligent Modifiers

Solutions. Delivered. Right.

Lucas Bio

Lucas is a 25 year old company. As such, we are one of the oldest POS companies in the restaurant segment. We have never had a goal of becoming one of the largest POS solution providers, rather we focused on being one of the best, most reputable POS solutions provider. We have succeeded because we have provided restaurant operators (1) the technology features required to manage their business, (2) a system that would evolve as new capabilities were needed and (3) outstanding service and support whenever they needed it.

We are a full-service POS Technology firm, all under one roof. In other words we do not use resellers, dealers, or 3rd-party service providers, (i.e., one company for help desk support and another for hardware support). We believe our "customer-direct" model accounts for a consistent, high end quality product and service that has fostered our customer's satisfaction for over 25 years.

Hardware Options

Tablet w/ Docking Station

Food Truck/Venue Touchscreen

Traditional Counter Touchscreen

Real-Time Cloud Solution

PIVOT is our real time cloud reporting solution. Pivot gives you access to all of your data in the "cloud" within 10-15 seconds from being entered at the restaurant POS. This provides you the ability to manage costs and profits daily without having to wait 24 hours for yesterday's information.
